INTRODUCTION

This Annual Planning Information Report for fiscal year 1987 is compiled for use primarily by socioeconomic planners. It contains a wide range of information on the population, employment, occupations, and socioeconomic characteristics of the people of Idaho. The planning report includes data for the state's six planning areas (see Figure A) as well as the statewide numbers. Data for Ada County (Boise City MSA), which is Idaho's only Metropolitan Statistical Area, are also included in many of the tables.

Description of Area

Idaho is located in the northwestern United States. It is bordered by Washington, Oregon, Nevada, Utah, Wyoming, Montana, and Canada. It is a sparsely populated state with varied terrain of sagebrush prairie and forested mountains. The Clearwater, Salmon, Lost River, and Bitterroot Mountains are among the mountain ranges within the state's borders. Major rivers include the Salmon, Clearwater, and Snake Rivers. The rugged beauty of the land and the easy access to many outdoor activities such as boating, skiing, hunting, and fishing have helped make Idaho attractive to tourists.

Idaho has traditionally been a resource-based state, but recent years have seen manufacturing, especially electronics, rapidly gaining in economic importance. Livestock, especially cattle, is important to the economy. Major crops grown by Idaho farmers include peas, alfalfa seed, Marion Kentucky Bluegrass seed, and 'famous' potatoes. Major manufacturing industries include food processing, forest products, phosphate processing into fertilizer, and electronics manufacturing. Mining has historically played an important part in the development of the state, with phosphate rock, silver, lead, zinc, and molybdenum among the resources being mined. Economic conditions of recent years have caused mining to become less important to the state's economy.

Boise MSA

There is only one Metropolitan Statistical Area (MSA) in Idaho. An area qualifies for recognition as an MSA in one of two ways: if there is a city of at least 50,000 population, or an urbanized area of at least 50,000 with a total metropolitan population of at least 10,000. The Boise City MSA consists of all of Ada County and is located in the southwestern part of the state. It has the largest population of any county in Idaho. Boise is the capital city of the state and is a center of activity for business and government. Like the rest of the state, Ada County has a mild climate and experiences four distinct seasons each year. Although Boise City itself is lush with trees and the Boise River, the surrounding area is naturally desert-like and farmers must rely heavily on irrigation to maintain their crops.

Highlights

Idaho's economy has not yet recovered from the recent national recession. Lower interest rates have helped the construction industry recently; but the effect has not reached Idaho's lumber and wood products industry, which continues to be plagued by less expensive, imported lumber. The electrical and electronic equipment manufacturers had a rough year, as demand for their products plummeted. Employment in this industry dropped 15.2 percent from 1984's level. The food and kindred products industry had a sluggish year, with virtually no growth in employment over 1984.

Idaho's labor force is expected to reach 453,390 in 1987. This is an increase of 4.9 percent over 1980's level, and is 4.0 percent above 1985's preliminary annual average labor force. The unemployment rate for 1987 is projected to be 6.2 percent, slightly lower than the 1985 annual average of 6.4 percent.

There was a 32.5 percent increase in Idaho's population between 1970 and 1980. The state's population is projected to further increase by 9.7 percent over the 1980 Census of Population by 1987. The 1987 population total is expected to reach 1,035,278.

Population

The population projections in this report were developed by the Research and Analysis Bureau. Data from the 1980 census, 1984 census projections, survival rates from the Bureau of Labor Statistics, and Idaho birth rates were used in making these projections. See Appendix for further detail.

Idaho's population continues on a gradual increase. Idaho's 1987 projected population is 1,035,278, a 9.7 percent increase over the 1980 census total.

Table 1 gives total, male, and female population for each county and area within the state. *Table 2* lists detailed age breakouts for the state and all six planning areas. *Table 3* presents data for the population 16 years old and older broken out by sex within each planning area and the state. *Table 4* shows county population by age groups 16 years and older. *Table 5* gives projected race/ethnic group totals for each county.

*DATA SUPPRESSED BY CENSUS BUREAU

Labor Force

To be considered in the labor force, a person must be at least 16 years of age and either employed or unemployed *and* looking for work. The term *Civilian Labor Force* excludes members of the armed forces. The Department of Employment deals primarily with the Civilian Labor Force. The projected county labor force data was estimated using preliminary 1985 annual average labor force by county. A ratio between the county annual average labor force and the statewide labor force for 1985 was developed and applied to the projected 1987 statewide labor force. The sex, age, and racial breakouts of labor force were derived by applying the 1980 census ratios to the 1987 projected labor force data. The area data are sums of the data for the counties which make up the areas.

The statewide labor force is projected to be 453,390 in 1987. This is a 4.9 percent increase from the 1980 labor force of 432,033. *Table 6* presents projected 1987 labor force information and unemployment rates by county. *Table 7* lists data for the 1987 projected labor force by sex for counties, areas, and the state. *Table 8* gives a county breakdown of labor force by age (16 years and older). *Table 9* projects the labor force by age and by totals within the areas. *Table 10* presents the projected 1987 labor force by race for the same areas. Because of census suppression of county data for some races, the data in this table are presented in only white and non-white classifications. Projected 1987 labor force by race/ethnic group within county is shown in *Table 11*.

*DATA SUPPRESSED BY CENSUS BUREAU

Unemployment and Unemployment Rates

The projections for county unemployment were made using preliminary 1985 annual average unemployment data for each county. A ratio between the county annual average unemployment and the statewide unemployment for 1985 was developed and applied to the projected 1987 statewide unemployment total. The sex, age, and racial breakouts of unemployment were derived by applying 1980 census ratios to the 1987 projected number of unemployed. The area data are sums of the data for the counties which make up the area.

The total number of unemployed in Idaho for 1980 was 28,283. The projection for 1987 is 28,236, a 0.2 percent decrease. The unemployment rate is expressed as a ratio of the number of persons unemployed to the number of persons in the labor force as a whole. The projected 1987 unemployment rate for Idaho is 6.2 percent of the labor force. See *Table 6* for county unemployment rates.

Table 12 lists unemployment by sex for 1987 for each county, area, and the state. *Table 13* shows unemployment by county broken into age groups.

Projected unemployment by age group within area is presented in *Table 14*. *Table 15* lists projected unemployment by race within area; the racial breakdowns are white and nonwhite due to census data suppression. Projected 1987 unemployment by race/ethnic group within county is presented in *Table 16*.

Tables 17 and 18 present projected 1987 unemployment rates by age and sex within area. Statewide and Ada County rates are also given in each of these tables. The Idaho Department of Employment calculates the monthly unemployment rates shown in *Table 19A*. This series is designed for use in tracking economic trends and is seasonally adjusted. The data shown in *Table 19B* are calculated using the same data base and is then adjusted to the Current Population Survey. Those data are not designed to be an economic series and are not seasonally adjusted. *Table 19B* should be used in the allocation of federal revenue. In both of the latter tables, there is a series break between 1979 and 1980 due to a revision to include 1980 census residency factors.

Note: These data have been adjusted to the Current Population Survey and should be used in the allocation of federal revenue. They are not designed to be an economic series and are not seasonally adjusted.

Characteristics of UI Claimants

Tables in this section present data on the characteristics of those persons who filed for Unemployment Insurance (UI) benefits with the Department of Employment during 1985. The data presented is based on a 20 percent sample of claimants who were surveyed after filing their claims.

Table 20 presents area totals of UI claimants by race, as well as the total number of claimants in each area. *Table 21* shows the highest level of schooling attained by the survey respondents. Nonresponse to this question was relatively high, hence the large number of claimants in the INA category. *Table 22* presents area-specific data on UI claimants by sex and duration of their unemployment. Many of the 0 weeks claimed shown in this table and in *Table 25* represent people who were found to be ineligible for Unemployment Insurance benefit payments. Many of these claimants were people who filed for extended benefits but who were required to file for regular benefits to determine their eligibility before filing for extended benefits.

Table 23 lists claimants by the industry of the claimant's principal employer prior to filing for UI benefits. UI claimants broken out by age and sex within areas are listed in *Table 24*. *Table 25* presents area data on the percentage of claimants by duration within industry of the claimant's principal employer. From this table, one can get an idea of which industries tend to produce long or short term unemployment. Once again, the category of 0 weeks claimed contains many people who were found to be ineligible for UI benefits, as well as some who were required to file for regular benefits before filing for extended benefits.

Table 26 shows area specific data on claimants' occupations and the industry of their principal employers. The data is expressed as a percentage of the occupational categories.

The final table in this section is not derived from the same data base as the others. *Table 27* lists statewide annual averages of unemployed persons by reason for unemployment for the years 1977 through 1984. This data is compiled by the Bureau of Labor Statistics and is published in *Geographic Profile of Employment and Unemployment*.

Occupational Information

Table 28 presents calendar year 1984 annual average employment by industry and county for employment covered by the Idaho Employment Security Law. This data is also compiled and published quarterly; similar data is published annually by the Department of Employment in its booklet *Basic Economic Data for Idaho*.

Table 29 lists 1980 census information on class of worker by county. This is followed by three tables of 1980 census occupational information. Table 30 gives a breakout of major occupations by area. Table 31 presents the same type of information by county. These two tables include only those persons who were employed at the time the census was taken. Table 32 lists occupational data for the state broken out by race and sex. The totals on this table are higher than those for the two previous tables because they include data for those persons who were unemployed at the time the census was taken, but who listed their most recent occupation if they had worked in the previous five years.

*Because Hispanic is not a racial category, it will not add into the total.

Socioeconomic Characteristics

The 1980 Census of Population is the most current source for much of this type of information. Included in this section is information on income, poverty, wages, and welfare recipients.

Mean and median income for households, families, and unrelated individuals by county is presented in *Table 33*. This is 1979 income data, which was collected along with the 1980 Census of Population. *Table 34* gives Idaho personal income by major sources for the years 1982 through 1984. Personal and per capita income by county for the years 1981, 1982, and 1983 are presented in *Table 35*.

Annual Wages in Idaho (*Table 36*) lists calendar year total wages paid by industry by county in 1984. Total wages paid during the year by employers covered under Idaho's Employment Security Law are listed in this table. This information is also compiled and published on a quarterly basis by the Department of Employment.

Table 37 gives the average hourly salaries for selected occupations in Idaho. This information is taken from the *Idaho Occupational Wage Survey*, which presents the results of an annual wage survey conducted by the Department of Employment. That publication includes similar data by industry and region.

Table 38 gives high school enrollments and drop outs for the years 1980 through 1987. Drop outs for 1986 and 1987 and enrollment for 1987 were estimated from previous years' data. Data in this table are for secondary schools; that is, grades 7 through 12.

Table 39 presents data on the 1987 projected number of economically disadvantaged persons by county by age group. This table is based on information provided by the U.S. Department of Labor from the 1980 census. The information presented in *Tables 40 and 41* are the most current standards for poverty level and the 70% of lower living standard income level. *Table 42* lists projected persons below poverty by race and county for 1987. Because of Idaho's relatively small population, some of the racial data has been suppressed.

Tables 43 and 44 present fiscal year 1985 annual average data on public assistance recipients and food stamp activity by area. Data for these tables, as well as for *Table 45*, were provided by the Idaho Department of Health and Welfare. *Table 45* gives statewide data on the age and sex of persons receiving public assistance by program. The data presented in this table are tabulated as of February 1986.

Table 46 lists civilian veterans in the state by period of service by county and is 1980 Census of Population data.

Table 47 gives statewide and area data on disadvantaged and displaced applicants by sex and age. *Table 48* presents disadvantaged and displaced applicants by age and education. Data for these tables is collected at local Job Service Offices. Because the selection process is based simply on those members of the labor force who choose to list themselves with Job Service, the system is not a representative sample of the Idaho labor pool. If this limitation is kept in mind, however, the level of detail can be useful in trying to form an image of Idaho's labor force.

Table 33

INCOME IN 1979 - IDAHO 1980 CENSUS

Table 40

POVERTY INCOME LEVEL

<u>Size of Family Unit</u>	<u>12-Month Maximum</u>
1	\$ 5,250
2	7,050
3	8,850
4	10,650
5	12,450
6	14,250
7	16,050
8	17,850

For family units with more than eight members, add \$1,800 for each additional member.

Table 41

70% OF LOWER LIVING STANDARD INCOME LEVEL (LLSIL)

<u>Size of Family Unit</u>	<u>12-Month Maximum</u>
1	\$ 4,630
2	7,580
3	10,410
4	12,850
5	15,160
6	17,730

For family units larger than six members, add \$2,570 for each additional member.

DISCLAIMER ON STATISTICAL USES OF LLSIL

It should be noted that the publication of these figures is only for the purpose of determining eligibility for JTPA and TJTC programs. The Bureau of Labor Statistics has not revised the lower living family budget since 1981, and has no plans to do so. The CPI adjustments used to update the LLSIL for this publication are not precisely comparable. Thus, these figures should not be used for any statistical purposes, and are valid only for eligibility determination purposes under JTPA and TJTC.

Areas will not add to statewide totals because of missing
data elements concerning county.

Employment Service Automated Reporting System (ESARS)

The final section of this report is a copy of the latest Department of Employment ESARS statewide report. This report is a matrix of information concerning job applicants on file at local Job Service offices. Because the selection process is based simply on those members of the labor force who choose to list themselves at a Job Service office, the system is obviously not designed to be a representative sample of the Idaho labor force. If this limitation is kept in mind, however, the level of detail can be useful when trying to form an image of the Idaho labor pool. One must understand that the data on the matrix (*Tables 50A to 50D*) are not accumulated totals, but a record of those applicants on file as of June 30, 1985.

Table 49 below gives some accumulated totals for program year 1985 taken from ESARS Table 91. Program year extends from July 1, 1984 until June 30, 1985.

Table 49

ESARS

Applicants Active At Any Time PY 1985 - Statewide
(July 1, 1984 - June 30, 1985)

Total Applicants	147,500
Handicapped	4,517
Veterans	22,880
UI Claimants	52,896
Minority	11,780
Female	65,217
Economically Disadvantaged*	15,484

Source: ESARS Table 91, "Year-to-Date Summary of Service to Individuals"

*Data on economically disadvantaged applicants is collected optionally and may, therefore, be incomplete.

Appendix

Methodology and Data Sources

The Department of Employment's projected 1987 population for Idaho is the basis for much of the information presented in this report. The following data were utilized in making the 1987 Idaho population projections:

1980 Census of Population - Bureau of the Census

1981 through 1984 Population Estimates - Bureau of the Census

1980 through 1983 County Birth Rates - Bureau of Vital Statistics

3-Year and 4-Year Survival Rates - Bureau of Labor Statistics

The 1980 census population by age for each of Idaho's counties was the starting point. Four-year survival rates were applied to the census population to estimate deaths; 1980 through 1983 birth rates were applied to estimate births. This 'survived' 1984 population was then adjusted to match the 1984 Census Bureau population estimate. Then this 1984 population was projected through 1987 using three-year survival rates and 1983 birth rates to produce 1987 population projections by age within county.

The following section will give a short explanation of sources and methodologies for the information contained in this report. Further information concerning methodology may be obtained from some of the source agencies. Each entry refers by table number to a table or tables in the text.

Tables 1 through 5 1987 projected population by age within county (see previous page for methodology) was apportioned according to 1980 Census of Population. Ratios of sex and race/ethnic groups to total county population were developed and applied to the 1987 population projections. County data was totalled to the area level for tables presenting area data.

Tables 6 through 11 The Department of Employment estimated 1987 Labor Force and Unemployment for Idaho. County 1987 labor force was estimated using the 1985 preliminary data for each county. A ratio between statewide and county labor force for 1985 was developed and applied to the projected 1987 statewide labor force. The sex, age, and racial breakdowns of labor force were derived by applying the 1980 census ratios to the 1987 projected labor force data. Unemployment rates were calculated by dividing total unemployment by total labor force.

Tables 19A and 19B The Idaho Department of Employment calculates the monthly unemployment rates shown in Table 19A. This series is designed for use in tracking economic trends and is seasonally adjusted. The data shown in Table 19B are calculated using the same data base and are adjusted to the Current Population Survey. Those data are not designed to be an economic series and are not seasonally adjusted. Table 19B should be used in the allocation of federal revenue. There is a series break in these tables between 1979 and 1980 because of a revision to include 1980 census residency factors.

Tables 20 through 26 The Continuous Wage and Benefit History (CWBH) survey, a 20 percent sample of persons who filed for Unemployment Insurance benefits, was used to build the data base from which the information for these tables was taken. The survey is done by the Research and Analysis Bureau of the Department of Employment.

Table 28 Idaho Department of Employment. Note this data is for only those workers covered under Idaho's Employment Security Law.

Tables 29 through 33 1980 Census of Population, Bureau of the Census, U.S. Department of Commerce.

Table 34 U.S. Department of Commerce, Survey of Current Business, August 1985, Volume 65, Number 8.

Table 35 Bureau of Economic Analysis, U.S. Department of Commerce.

Table 36 Idaho Department of Employment. See note regarding Table 28 above.

Table 37 Idaho Occupational Wage Survey, March 1986, Research and Analysis Bureau, Idaho Department of Employment.

Table 38 The Idaho Department of Education provided 1980-1986 enrollment totals and 1980-1985 total dropouts for secondary schools (grades 7 through 12). Enrollment for 1987 was estimated by subtracting 12th graders and adding 6th graders to the 1985 enrollment totals. Dropouts for 1986 and 1987 were estimated by applying an average percentage change in dropouts over the years 1980 through 1985.

Table 39 1987 projected population by county was apportioned using 1980 Census of Population ratios.

Tables 40 and 41 Idaho Department of Employment JTPA Procedures Manual and Federal Register, Volume 50, Number 130, July 8, 1985.

Table 42 Total persons below poverty in each county was estimated based on the ratio of total county population to persons below poverty in the 1980 Census of Population. Race/ethnic breakouts were estimated based on ratios of each race/ethnic category to total persons below poverty in each county.

Tables 43 through 45 Research and Statistics Unit, Division of Welfare, Idaho Department of Health and Welfare.

Table 46 1980 Census of Population, Bureau of the Census, U.S. Department of Commerce.

Tables 47 and 48 The Idaho Department of Employment's National System Data Base Interface (NSDBI) file is the data base of applicant characteristics collected at local Job Service Offices. The data is the same as that used in the ESARS system and is not a representative sample of Idaho's population or labor force. It can be useful as a tool if this limitation is kept in mind.

Tables 49 and 50A-D Employment Service Automated Reporting System, Idaho Department of Employment.
